

Questions :

- 1) *Is the oil used in our pumps are Environmental friendly...?*
- 2) *Type of oil used is safe in clear drinking water application...?*

Answer:

1) In Aqua's **Submerged Centrifugal Pumpsets**,

we are using Eco Friendly Light Liquid **Paraffin White Mineral Oil** (ISO VG 20 or 40);

which is **specialty refined product**

used for **non-fuel purposes** such as food & cosmetics. 😊

a. It is a highly **Purified** material that is

Non-Reactive

& **Odorless.**

2) Also, **Unlike VTs or HSCF pumps**, the Oil in our pumps is **NOT a consumable** -

i.e. it **does not leak** into the pumped water

(as it is Sealed Off by **not One but Two Mechanical Seals**)

Hence, The **Oil used** in Aqua's Submerged Centrifugal Pumpsets are **100% Environmental friendly** & **Safe** for **Clear Drinking Water Application.** 😊
