

Q: Who can Repair the Submerged Motor...?

Answer:

- 1) Any Workshop which is **Authorized**  (say by Crompton Greaves, Marathon, ABB, Siemens, Laxmi, KEC, etc in addition to those already Authorized by Aqua) to Repair Conventional Induction Motors (also used by VTs & HSCFs (apart from a host of machinery)) can Repair the Submerged Motor.
- 2) At the most, IF:
 - 2.1. The Mechanical Seals need Replacement; they can source them either from **Aqua** or **Directly** from **OEM Suppliers** (for e.g. Eagle, Burgmann, Sealmatic, etc).
 - 2.2. The Bearings need Replacement; they can source them either from **Aqua** or **Directly** from **OEM Suppliers** (for e.g. SKF, FAG, NTN, etc).
- 3) 😊 There is **No Monopoly** either of Skills  or Parts.
